

> What is harmful drinking?

Harmful drinking is defined as a pattern of alcohol consumption causing health problems directly related to alcohol. This includes psychological problems such as depression, alcohol-related accidents or conditions such as acute pancreatitis.

> What are the risks of heavy drinking?

Long term heavy drinking can increase your risk of developing:

- High blood pressure - a major risk factor of having a stroke or heart attack
- Heart disease
- Liver disease
- Liver cancer and bowel cancer
- Mouth cancer
- Cirrhosis of liver (where damage to the liver causes scar tissues to build up which can lead to cancer)

> Other effects of alcohol

- **Alcohol has high sugar content;** drinking excessive amounts over time can decrease the effectiveness of insulin, leading to high blood sugar levels (diabetes)
- **Alcohol is a diuretic-** it acts on the kidneys to make you lose more fluids from your body, leading to dehydration which can cause headaches
- **Alcohol poisoning** - this may lead to vomiting, seizures (fits) and falling unconscious

> What about treatment?

- Cognitive behavioural therapy (CBT) has been shown to be helpful
- Medication such as acamprosate, disulfiram, naltrexone and nalmefene can be prescribed to treat alcohol misuse
- Keeping a drinking diary to record how many units of alcohol you drink a week may help control your alcohol intake

Alcohol Units

1 unit is:

½ pint beer, lager, cider ABV 3.6%
125ml glass of wine
25ml measure of spirits
100ml glass of prosecco

Alcohol Guidelines

- Men and women should not regularly drink more than 14 units a week
- If you drink more than 14 units of alcohol a week, it's best to spread this evenly over three days or more
- Pregnant women should not drink alcohol
- Have one or two alcohol free days each week
- If you have drunk too much, allow 48 hours for your body to recover

Do you know that?

- Alcohol is very high in calories and excessive consumption can lead to weight gain
- Alcohol can affect your sleep patterns and it best to avoid drinking alcohol before bedtime
- Alcohol weakens the heart muscle, which can mean the heart does not pump blood efficiently, this can cause premature death, usually through heart failure
