

Combatting Isolation During Covid-19

Due to measures in place because of the current pandemic, many of us are placed in circumstances where we have had to significantly adapt out daily lifestyles. At this time, we have had to maintain rules around social distancing, and in some circumstances self-isolation. This change can feel overwhelming in itself, uniquely affecting the ways in which we may think, feel and behave.

As humans, we are social beings; we thrive from interactions and relationships with other people. As a result, isolation for extended amounts of time can bring on feelings of loneliness, which can lead us to experience mental health distresses such as worry or low mood. In fact, a recent survey** that took place in the UK found that just over one in five (21%) adults had experienced loneliness during the pandemic.

Loneliness is often described as a feeling we experience when our human need for meaningful social contact is not met. The feeling of loneliness is not a mental health condition in itself, but is strongly connected to mental health distress. For example, if we already have an existing mental health condition, we might find that feelings of loneliness are intensifying difficulties associated with this.

What are common issues associated loneliness and isolation as a result of Covid-19?

Research has shown a number of common issues faced by people who are experiencing loneliness, these include feelings of:

Stress	Worry
Sleep difficulties	Low mood
Confusion	Boredom
Anger	Frustration
Struggle to remain optimistic	Depression*
Loneliness	Low self-esteem

^{*}An experience of low mood due to loneliness is common for many people, and can usually be managed independently through appropriate self-help strategies. It is possible to notice that a state of low mood has become a state of depression, with little or no warning. Depression is classified as a mood disorder, and severely impacts a person's ability to think, feel and behave as usual for an intensive or extended period. If you feel as though you are experiencing depression, please contact a primary care service such as your **GP** or **NHS Talk Together Bromley** for some in-depth support during this time.

**Coronavirus and the social impacts on Great Britain: 16 April 2020:

What can I do to manage my mental health?

Keep connected. Whilst we have had to physically distance ourselves from others during this time, we are social beings and thrive from social connection. Reach out to loved ones via platforms such as: telephone calls, text messaging, video calls and social media platforms. This will help combat loneliness or distress we may experience when physically isolated. Perhaps think about how you can create regular ways of linking with people whether that be a group weekly video chat, or a telephone call with a loved one at the same time each week.

Explore your worries or feelings. Help yourself to explore your feelings safely, keep a mood journal and reflect on how you cope day to day, think of ways you could do things differently, set realistic goals and help yourself work towards them, and if you don't succeed the first time, remember you can always try again. Reach out to others for support where necessary.

Find your sense of purpose. You might want to start a new hobby learn a new skill or establish a healthy routine. Keeping our mind set on a goal, and working towards this can help us to keep our mind positively engaged, boost our overall wellbeing and self-esteem. Keep in mind that your purpose doesn't necessarily mean you have to change what you're doing already.

Try to be more mindful. Recognising the signs when we are experiencing mental stress means that we can help ourselves to stay safe and well. If our brains become too overloaded, or we reach a point of exhaustion, it can be detrimental to our health. Try finding 5-10 minutes in your day to stop and take a breath. Stand or sit somewhere quiet where you can breathe in fresh air, and relax your mind for a moment. Try to heighten your senses and feel grounded. If it helps, try using the web-based app Just6 for mindfulness and relaxation you can access in the palm of your hand.

Look after your body. Try to be proactive in eating a balanced and nutritious diet every day, and eat at least 3 meals a day, with 1-2 litres of water. Also focus on how you can be more active, making time in your day to stretch your body, and let your mind breathe is vital to elevating your emotional wellbeing. Try to introduce a 15-30-minute activity into your daily routine, whether walking, running, doing some yoga or going for a bike ride. Exercising releases endorphins, which increases mood and general positive thinking.

Practice gratitude. At times of uncertainty, engaging in gratitude practice can help to reconnect with feelings of joy and positivity. At the end of each day, take time to reflect on what you have been thankful for during that day. Try to be specific and look out for the little things; It was sunny at lunchtime, my plant has started to grow, I enjoyed my dinner.

Where can I go for more help?

Talk Together Bromley

Talk Together Bromley is a free NHS evidence-based service in Bromley offering Cognitive Behavioural Therapy and counselling. You can self-refer directly to the service via telephone or their website. The service is designed to support people who may be experiencing mild-moderate difficulties with their mental health, including feelings of stress, anxiety and low mood/depression.

Website: www.talktogetherbromley.co.uk

Telephone: 0300 003 3000

NHS Fitness Studio

The NHS have a range of self-help guides online to help you the move gently, and build confidence with movement in the comfort of your own home. Including exercises for strength, flexibility and balance. Search NHS Fitness Studio, or website to download their free exercise guides now

Website:

Every Mind Matters

Online platform providing expert advice and practical tips around how to maintain your wellbeing. Includes specific tailored support around managing mental health during the coronavirus pandemic and also offers an online tailored 'mind plan' depending on your needs.

Big White Wall

Big White Wall is an online community for people who are stressed, anxious or feeling low. The service has an active forum with round-the-clock support from trained professionals. You can talk anonymously to other members and take part in group or one-to-one therapy with therapists.

Samaritans

A national helpline providing free and confidential listening support to individuals who are struggling with low mood, stress, anxiety and depression, and callers do not have to be suicidal to make contact.

Telephone: 116 123 (Open 24/7) **Website:** <u>www.samaritans.org</u>

Shout

Shout line is the free, 24/7, confidential text message service for people in crisis. Text **SHOUT** to **85258** to text with a trained crisis volunteer.

If you feel in crisis, tell someone. Text 'HELP' to 85258 for crisis counselling, ring Samaritans on 116 123 for listening support, or the Oxleas Urgent Advice Line on 0800 330 8590 for practical advice, all accessible 24/7. If you feel at risk to yourself, likely to cause harm or complete suicide phone 999-Ambulance immediately.

My Mood Diary

Situation Date and time. What was happening before you felt this way?	Emotion E.g. sad, guilty, empty, anxious and Intensity Rating From 0 (mild) to 100 (intense)	Physical Symptoms What did you notice happening in your body?	Thoughts What went through your mind? How did you interpret what was going on?	Behaviours What did you do in response to this? Did you avoid anything?

Challenging Your Thoughts

The **Take Your Thought to Court** activity is one you can utilise to challenge unhelpful thoughts. It uses the metaphor of a court trial with; A defence barrister – defending the truth of the unhelpful thought and a prosecutor – undermining the truth of the unhelpful thought. Gathering evidence in this manner allows you to assess how realistic and helpful the thought actually is.

What is the Negative thought? Choose an unhelpful thought from step one that caused the most emotional distress	Defence What suggests that the thought is true? What are the facts and evidence?	Prosecution What suggests that this thought is false? What evidence is there to discredit this thought?

Step 3: Increase balanced and helpful ways of thinking

Our thoughts can negatively impact us in many ways; the purpose of this final step is to develop a more helpful and balanced way of thinking, in turn improving how you feel. You are not disregarding the initial unhelpful thought, you are just weighing up all of the evidence for and against this thought to get to an alternative perspective.

Verdict Given the evidence, what is a more helpful, balanced way of viewing this thought? Outline your new way of thinking. If a friend were in a similar situation, what would you advise?)

Next Steps...

Following these three steps, think back to the situation you were in when you had the initial unhelpful thought. In your head, replace the initial unhelpful thought with the new more helpful thought and explore how this thought might change the intensity of the emotion you felt at the time, and how you subsequently behaved. It might be that the first few times you try this the distress only reduces slightly but the more you practice this way of thought challenging, the intensity of the unhelpful thoughts should lessen and the associates emotional distress should decrease.

A Mindfulness exercise

The 'five senses' mindfulness exercise is a relatively easy one that can be practiced anywhere quickly, helping to bring you to a mindful state, aware of the present moment:

 Notice five things that you can see - Look around you and bring your attention to five things that you can see. Pick something that you don't normally notice, like a shadow or a small crack in the concrete.

2. Notice four things that you can **feel** - Bring awareness to four things that you are currently feeling, like the texture of your pants, the feeling of the breeze on your skin, or the smooth surface of a table you are resting your hands on

3. Notice three things you can **hear** - Take a moment to listen, and note three things that you hear in the background. This can be the chirp of a bird, the hum of the refrigerator, or the faint sounds of traffic from a nearby road.

4. Notice two things you can smell - Bring your awareness to smells that you usually filter out, whether they're pleasant or unpleasant. Perhaps the breeze is carrying a whiff of pine trees if you're outside or the smell of a fast food restaurant across the street.

5. Notice one thing you can **taste** - Focus on one thing that you can taste right now, at this moment. You can take a sip of a drink, chew a piece of gum, eat something, notice the current taste in your mouth, or even open your mouth to search the air for a taste.

Creating my routine

 <u>Morning</u>
Wake up at
Mindfulness/gratitude/gentle stretches (a mindful activity)
Eat Breakfast at
Look at what you have achieved the day before from a 'have done' list
Write down three tasks/goals you would like to achieve for the day
Plan in regular breaks for the day, including times for lunch and dinner
Begin tasks

/	Afternoon
	Have lunch at
	Short physical activity (walking/stretching)
	Mindfulness exercise
	Add to 'have done' list
	Think about which tasks to focus on for rest of afternoon

/	Evening
	Set a stop time for
	Engage in daily physical activity if you haven't already
	Prepare dinner (with others in your household where relevent)
	Add to 'have done' list
	Watch TV
	Read a book
	Come away from Mobile/Computer/TV an hour before sleep
	Complete gratitude journal for the day (three positive things)
	Decide to sleep at
